Tail Stop: 35 7/16" (900)

Designed by: cannon

File: magic61
Blank:

Measurements are center, one foot in and one foot back, over curve.

Comments:

lowerd rocker entry and flatened tail . could use H2 as fins for more cant. 8 degree cant for lift and looseness. slight single to double concave. very wide and flat deck this shortens the board a lot . wide nose for early planing speed , gets u going in mush. medium to low boxy rail , with hard edges in tail has i liter less volume then gun. could move widepoint forward a bit . this boa is all about early speed and downline maneuvers rather then tight pocket cutties
